Abstract

The abstract should be a single paragraph of 200–250 words written as a self-contained summary of the article. **Background:** place the question addressed in a broad context and state the purpose of the study. **Methods:** briefly describe the main methods, materials or treatments applied. **Results:** summarise the main findings with key quantitative results. **Conclusion:** state the main conclusions and their implications. Do not cite references, figures or tables in the abstract, and avoid undefined abbreviations.

Keywords: *keyword one; keyword two; keyword three; keyword four; keyword five (3–6 keywords)*

1. Introduction

This template gives the layout for manuscripts submitted to journals of HJPARAM Publication. Replace the placeholder text with your own content. Body text is 10 pt Times, justified, in two columns; the title, abstract and keywords span the full width.

The introduction should briefly place the study in a broad context, highlight why it is important, define the purpose of the work and its significance, and review the current state of the research field with key publications cited [1, 2]. Conclude with the main aim of the work.

2. Materials and Methods

Describe the materials, methods and procedures in sufficient detail to allow others to replicate and build on the published results. New methods should be described in detail; established methods can be briefly described and appropriately cited [3].

2.1. Subsection Heading

Use numbered subsections where needed. Equations are numbered on the right:

$$E = mc^2 \tag{1}$$

and referred to in the text as Equation (1).

2.2. Statistical Analysis

State the software, tests and significance level used (e.g., $p < 0.05$).

- Bulleted lists are formatted like this.
- Keep list items short.

3. Results

Present the results clearly and concisely. Tables and figures are cited in order of appearance (Table 1, Figure 1).

Wide figures or tables may span both columns using the starred environments `figure*` and `table*`.

Table 1. Table caption placed above the table; short and descriptive.

Parameter	Group A	Group B
Variable 1	00.0 ± 0.0	00.0 ± 0.0
Variable 2	00.0 ± 0.0	00.0 ± 0.0
Variable 3	00.0 ± 0.0	00.0 ± 0.0

Values are mean ± SD (n = X). Table footnotes go here.

[Insert Figure 1 here – minimum 300 dpi]

Figure 1. Figure caption placed below the figure. Explain all symbols and abbreviations.

DOI: 10.XXXXX/hjparam.XXXX

4. Discussion

Interpret the results in light of previous studies and the working hypotheses. Discuss the findings and their implications in the broadest context possible, and highlight limitations and future research directions [4].

5. Conclusions

Summarise the main conclusions of the study. Do not repeat the abstract; focus on the contribution and implications of the work.

Author Contributions: Conceptualization, A.B.; methodology, C.D.; writing—original draft, A.B.; writing—review and editing, E.F. All authors have read and agreed to the published version.

Funding: This research received no external funding / was funded by [Agency, grant no. XXX].

Data Availability Statement: State where the data supporting the results can be found.

Acknowledgments: Acknowledge support not covered by author contributions or funding.

Conflicts of Interest: The authors declare no conflicts of interest.
